

This week I had a deadline in my bachelor's thesis which meant that I prioritized working on that mon-wed. The rest of the week me and William Schmitz have been working together on user story 3.21. However, because we are using such advanced frameworks on the backend, and also the frontend, it is very difficult to understand and know how to implement things. As this course is being read in parallel to another course it is very hard to both learn several new frameworks and programming languages as well as also contributing to developing the application. It is extremely time consuming to have to learn about new functionality within these frameworks every sprint, which limits the time I have available to actually implement things. This is something that would be good to discuss in our group but as we have come so far with the application already, we can't change frameworks and ways of working. A first step to resolve this is that I have set up a meeting with Hugo, who is very skilled, to walk me and William through how the server and everything really works. Hopefully this will make it easier for us during the last sprint.

As it has been really difficult to implement things I am a bit worried of how much I have actually contributed to the final product in comparison to other people in the group. My plan is to do my best during the last sprint and then take more responsibility over our report as I feel that I can contribute a lot in that aspect.

During last week's reflection I said that I expected to complete my user story, but I ran into some problems with my IDE that caused my pull request to not clear the automatic tests. Therefore, another team member had to take over that user story. I will try to resolve these IDE issues during the meeting with Hugo as well. A lot of the code that I wrote for the user story was reused however but won't show up as my contribution. This is another reason why I have been a bit worried about this the last couple of days.

As for the discussion about who should be PO, we have decided that I will still hold that position. I talked to the stakeholder and they thought the communication worked well. Tomorrow I will also have a meeting with the stakeholders to show them the progress. It will also be an opportunity for us to gather information about whether we should make any tweaks during the last sprint.
