

**What do I want to learn or understand better?**

This week I got a slightly better understanding of how React's query and routing functionality works as well as other parts of the backend. I want to continue understanding how to apply data more dynamically at the frontend by connecting the backend to it. I also want to understand better how the POST functionality works so that I can implement the functionality of updating the data from interactions with the frontend within the time-limit of the next sprint. I will try to do this by reading documentation and asking my team whenever necessary.

As it is the last sprint, I also want to learn how to finish a project with the agile way of working. To achieve this, I think I will learn something from the lecture we have this Wednesday as well as by discussing with my team.

**How can I help someone else, or the entire team, to learn something new?**

The workshop / work session that we had was very helpful and I felt like I learned much more efficiently than usual. I also showed my team mates at the backend how to do certain SQL queries and logic behind what to query for. I hope to learn more during this next workshop that we have this week. There, I hope to help as many as possible learn something by for example learning it together by discussion. This also applies in general.

**What is my contribution towards the team's use of Scrum?**

As the Scrum master, I keep doing what I've done every sprint except I always try to make it better and more efficient by applying past experiences. That means that I am trying to do better and more efficient standup meetings, sprint planning sessions, sprint reviews and retrospectives. I also collected data for the KPIs together with my team and notified when certain parts of our work process needs to be done or when certain course assignments should be done.

We delayed our sprint review this sprint as our PO was absent. The PO did it during the weekend instead and so we will get our feedback next sprint.

**What is my contribution towards the team's deliveries?**

I did some parts of the feedback for 5.1 and left the CSS part to another teammate who wanted to do it. Instead I did 5.1.1 that I think is finished and will be reviewed next sprint. I also helped with some SQL logic for certain endpoints. By the end of the next sprint I plan to update all technical documentation so that it is up-to-date as well as finish 5.1.1 completely and afterwards implement a way to submit updated data from the view I am working on. Now that my bachelor thesis is turned in I hope to be able to contribute more during the sprint.
