

- What do I want to learn or understand better?

This week I've mainly focused on the database part of the project. I would like to know more about the other parts of the project the others have focused more on. This is probably something I will try to learn about next week during the easter break to have something to do and catch up on the other parts of the project.

- how can I help someone else, or the entire team, to learn something new?

Since we from "Industriell ekonomi" know more about the database-part of the project we can teach the others about these concepts. Such as ER-diagrams, schemas, domain descriptions etcetera.

- what is my contribution towards the team's use of Scrum?

Sadly I couldn't participate in this Fridays last part of the scrum. Through the week I've participated in all meetings and reconsidered our way of working with user stories to make sure they aren't dependent on each other. I still find this quite hard and to "slice the cake" is still a hard concept to actually do.

- what is my contribution towards the team's deliveries?

I've worked on the database-part of the project along with Renato and Jonas. We have all 3 worked together with all the parts of the database and participated equally in this. We had a seminar and had to fix a little more on our bachelor thesis this week and communicated this with the team to make sure everyone knew about this.
