

What do I want to learn or understand better?

- Last week I said I wanted to learn more about the server/Wix-side of the project. This is something I've done well and have also written code on the Wix-website. I feel the same interest towards the project and learning from the more experienced members of our team is very rewarding. As well as reading online and learning about Spring, Wix, SQL, java. I have gotten the hang of the connection between the different parts of our projects this week.

How can I help someone else, or the entire team, to learn something new?

- This week I've learned a lot about our project and feel that this knowledge I can easily pass on to others in our team. I also feel that what I've learned this week not as many other members of the team know so it can more easily be thought.

What is my contribution towards the team's use of Scrum?

- In the last 2 meeting we have had, both sprint planning and sprint review I feel like I've been more active and participated much more. I've also organized for us all to meet in the coming week to have a type of "work shop" so we can teach each other about different parts of the project. I have also participated in each stand up.

What is my contribution towards the team's deliveries?

- My user story this week was quite hard. As I said I had to learn more about different parts of the project which was very rewarding but time consuming. We can not fetch correct student data from the Wix server. This is automatically inserted into our database and automatically fetched every 3 hours to update the information.
