What do I want to learn or understand better?
Scrum is starting to feel like it's coming together, and it will be interesting to see it implemented in practice. Otherwise, I look forward to learning about creating web interfaces, as a way to contribute to the project.

How can I help someone else, or the entire team, to learn something new?
I feel like I am overall the least knowledgable about the areas we are covering with our project. I will start learning about React and it's components before the first sprint starts, so I can contribute on that front.

What is my contribution towards the team's use of Scrum?
I have been part of creating user stories during the week and will continue to learn Scrum together with the team.

What is my contribution towards the team's deliverables?
The project scope deliverable was completed this week through discussions with the group during the week. I had some trouble contributing to it since I am as I said probably the least knowledgable about the areas the project is covering. I took part in the work, but did not do much original stuff, which will hopefully change as I get more competent in relevant areas.
