What do I want to learn or understand better?

- Last week I said that the learning curve had accelerated. This week has been very hectic due to turning in our bachelor thesis (mon – thu) and traveling home for the weekend. Due to this I haven't really learned much. I feel like we are using way too many frameworks and languages for our project, this is probably something that is necessary but when things collide and you need to learn another part of the project it feels impossible. This is hard since we haven't been thought a lot of this earlier. Being able to both learn completely new thing and being productive is time-consuming.

How can I help someone else, or the entire team, to learn something new?

- Right now I feel that everything is hectic and hard. The coming week I will come to school and attend our workshops to learn more and possibly teach other something.

What is my contribution towards the team's use of Scrum?

- Showing up to almost every meeting as well as being active in these and keep working the "scrum-way".

What is my contribution towards the team's deliveries?

- This week I've co-coded with Jonas. We felt that we would be able to fit our schedueles well due to the bachelor thesis hand in and we wanted to work on the same thing. This felt productive. We created an endpoint for the function to save educational moments' Booleans in our database and make the server listen to the application and add these new educational moments to the database. After meeting with Hugo this weekend both me and Jonas got a better idea of what to do and was able to complete our user story. When I feel like I don't contribute as much as others due to my lack of knowledge I try to contribute more by working towards scrum as well as trying to learn about the new frame works or languages we use. When I feel like I won't have time to learn something new I try to take user stories that complement my existing knowledge.
