This week I reached my goal of planning my time better than last week. I managed to set aside time two evenings this week that made me able to work on my user story for this week. I am not yet done but as we have extended the duration of each sprint I am confident that I will complete it before the sprint ends.

I also focused on back-end user stories more than front-end this week which turned out to be a good choice. Partly because I have more knowledge about the back-end and partly because I think that it is more fun. However, I have not had the time to read up on the code that is being written on the front-end. My strategy to get knowledge about this is instead to be active during our sprint review and ask questions about what has been built.

This week my user story has been focused on being able to query our database via our server. It has required me to read up on some SQL and also how to make queries through Java code. I have asked a team member that is very skilled about a lot of stuff but also searched online. Next week however I want to work even more independant and maybe not ask team members as much as I did this week. Instead I will do my own research.

As I am doing an internship in parallel to working on the project we in the group have discussed removing me from the role as PO. I am not able to be as reachable as I would need which makes it harder for us to involve the stakeholders. Also I can't be as involved as I would need in handling our User stories and epics. Therefore, before next week I will inform the stakeholders about the situation so that we are transparent and also inform the new PO so that he/she can take over.
